aim of the subject

Acquiring the basic methods necessary to change inefficient patterns of thinking and body use so as to develop better coordination and proprioception and thereby improving learning and performance quality.

content

One on one lessons are aimed at practising CI and removing the impediments it reveals and giving direction so that change can happen. Practising the principles of AT in the use of body in activity.

learning outcomes

At the end of the course students

- are able to independently use the principle of conscious inhibition and direction,
- are able to use the principle of conscious inhibition and direction in their everyday work.

assessment

Assessment will take place in the form of open lessons aimed at analysing the use of CI.

At the end of the year course, students will be required to write an essay titled □My experience of CI in practice □.

assessment criteria

Student

- is able to use the Alexander Technique in their everyday work, - has written the essay.
